Installation Guide for Log Ladder

1. Scribe a level line on the header board along the bottom of the Flat Plate (Figure 1). Using all 8 of the supplied screws, install the Flat Plate directly onto solid wood (Figure 2). Be sure to position the bottom of the Flat Plates along the scribed line on the header board.

Figure 1

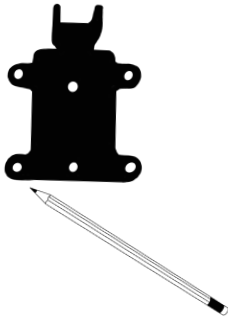

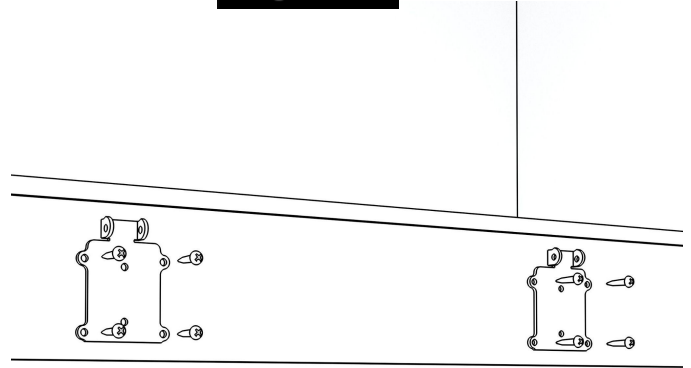

Figure 2

Note: If the loft floor edge protrudes more than 1 inch beyond the vertical surface of the header board, place the bottom of the Flat Plat 3-1/2" down from the bottom of the protruding loft floor.

2. Position the ladder's sliding upper assemblies so that the pivot-point of the slide fits between the ears of the Flat Plate. (Figure 3) *The pivot-point is a small through-hole at the top of the sliding assembly.*
3. Slide the Clevis Pin into the through-hole (Figure 4) and insert the Cotter Pin (Figure 5) to secure the ladder.
